Agenda

- SQL Server Integration Services - 2008
 - What is new in SSIS 2008
 - Improved Scripting
 - Lookup Improvements
 - Data Profiling Task
- SQL Server Reporting Services - 2008
 - Describe the Report Server architecture changes in SQL 2008.
 - Discuss about the new features in data visualization.

What is new in SSIS 2008

- Improved Scripting – C# support in script task
- Cached Lookup
- Data Flow task improvements
- Data Profiling
- Improved Memory Dumps
- Merge
- Change Data Capture (CDC)

Improved Scripting

- Replacement of old VSA engine used for SQL Server 2005
- Introduction of new VSTA scripting engine
- Now more easy to reference .NET assemblies.

demo

Improved Scripting

Lookup Improvements

- Explicit control over sharing of data
 - Cache connection manager
 - Populate cache in one data flow task and use in other
 - Cache can be populated in any part of dataflow and can later be used for lookup
 - Cache can be persisted to a file and re-used
 - Similar lookup in package can share the cache

Lookup – Notable features

- A cache for misses. Don't keep querying for rows that doesn't exist
- A missed row output, not an error output

demo

Cache Lookup

Windows Server 2008

Visual Studio 2008

Microsoft
SQL Server 2008

Data Profiling

- Data Profiling task let you analyze SQL tables to maintain data quality
 - Analyze a set of columns/tables for
 - Candidate keys
 - Column length distribution
 - Null ratio
 - Pattern detection
 - Value distributions and stats
 - Functional dependencies
 - Value inclusion

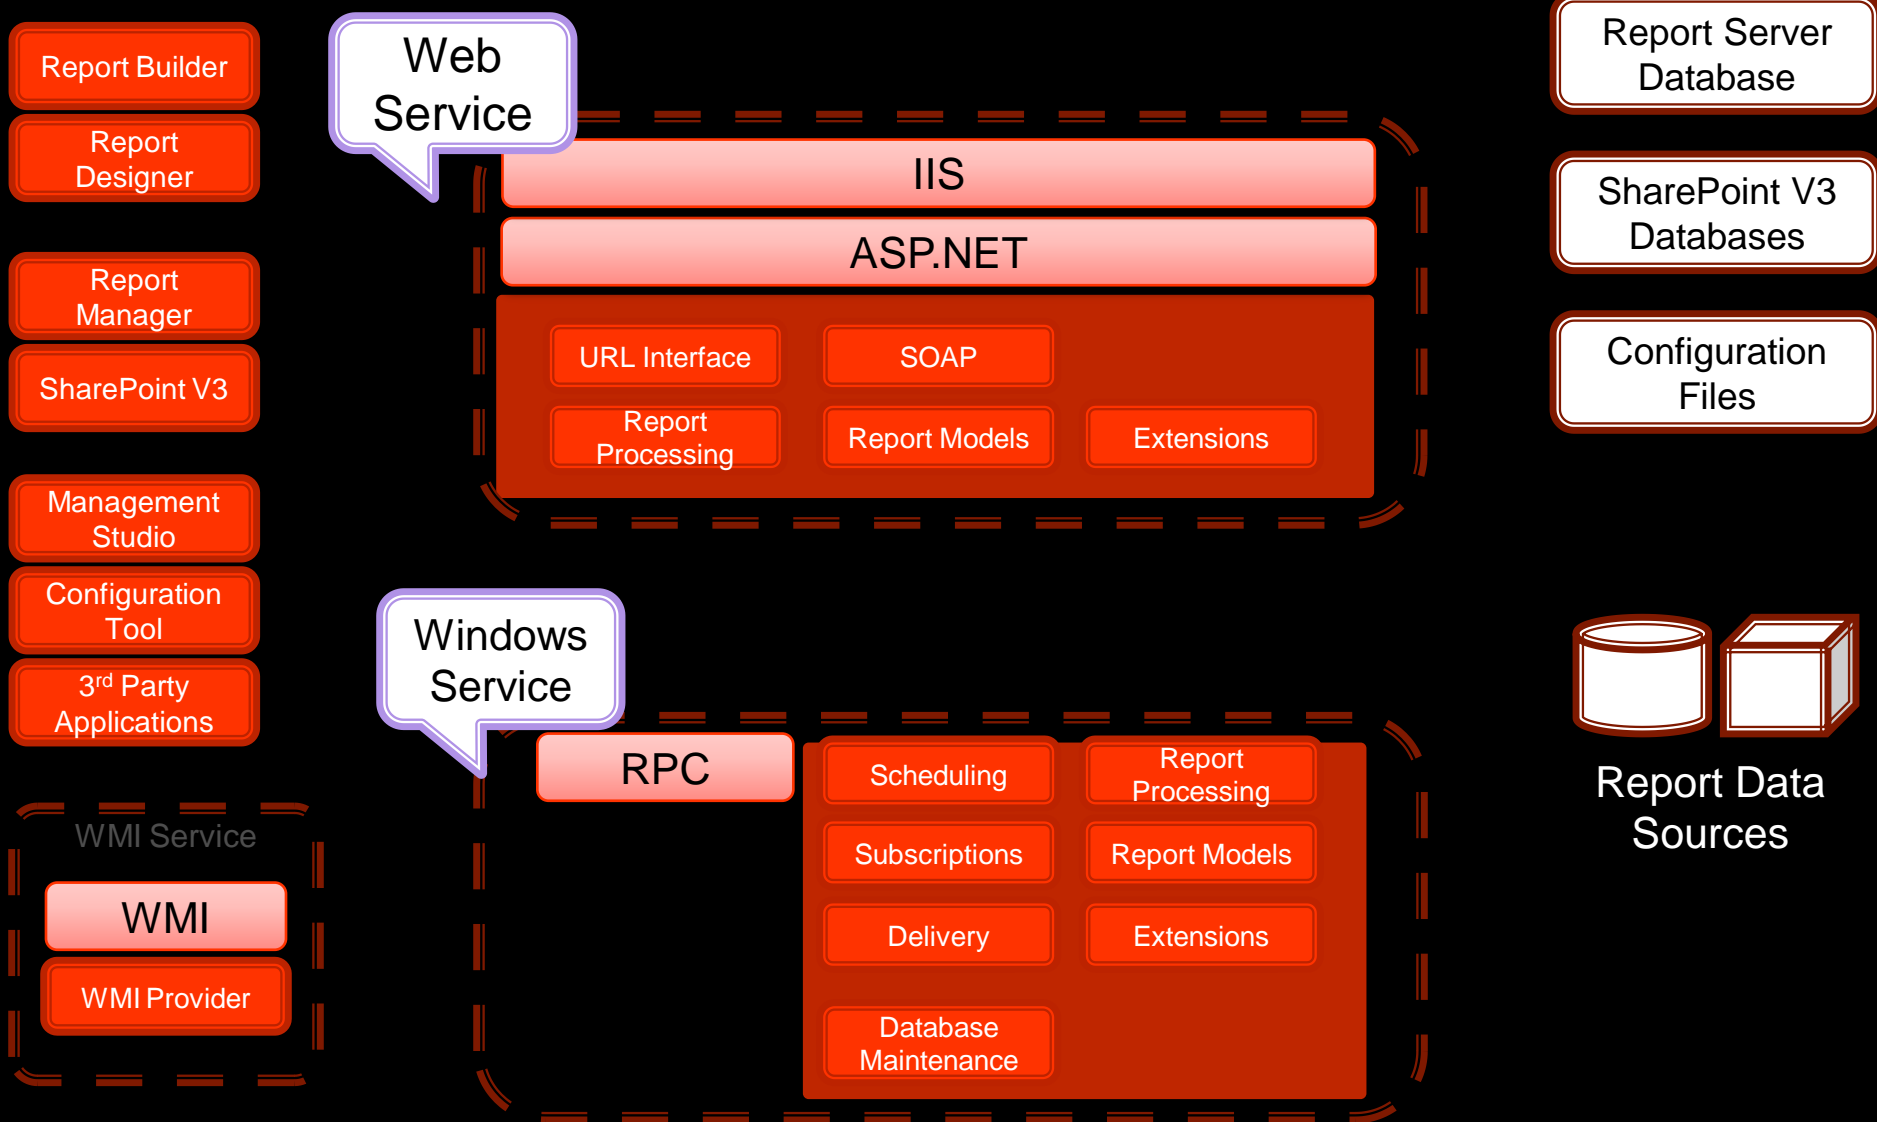

demo

Data Profiling

Agenda

- SQL Server Integration Services - 2008
 - What is new in SSIS 2008
 - Lookup Improvements
 - Data Profiling Task
 - Debugging Enhanced – “Super Dump”
- SQL Server Reporting Services - 2008
 - Describe the Report Server architecture changes in SQL 2008.
 - Discuss about the new features in data visualization.

SSRS 2005 Architecture

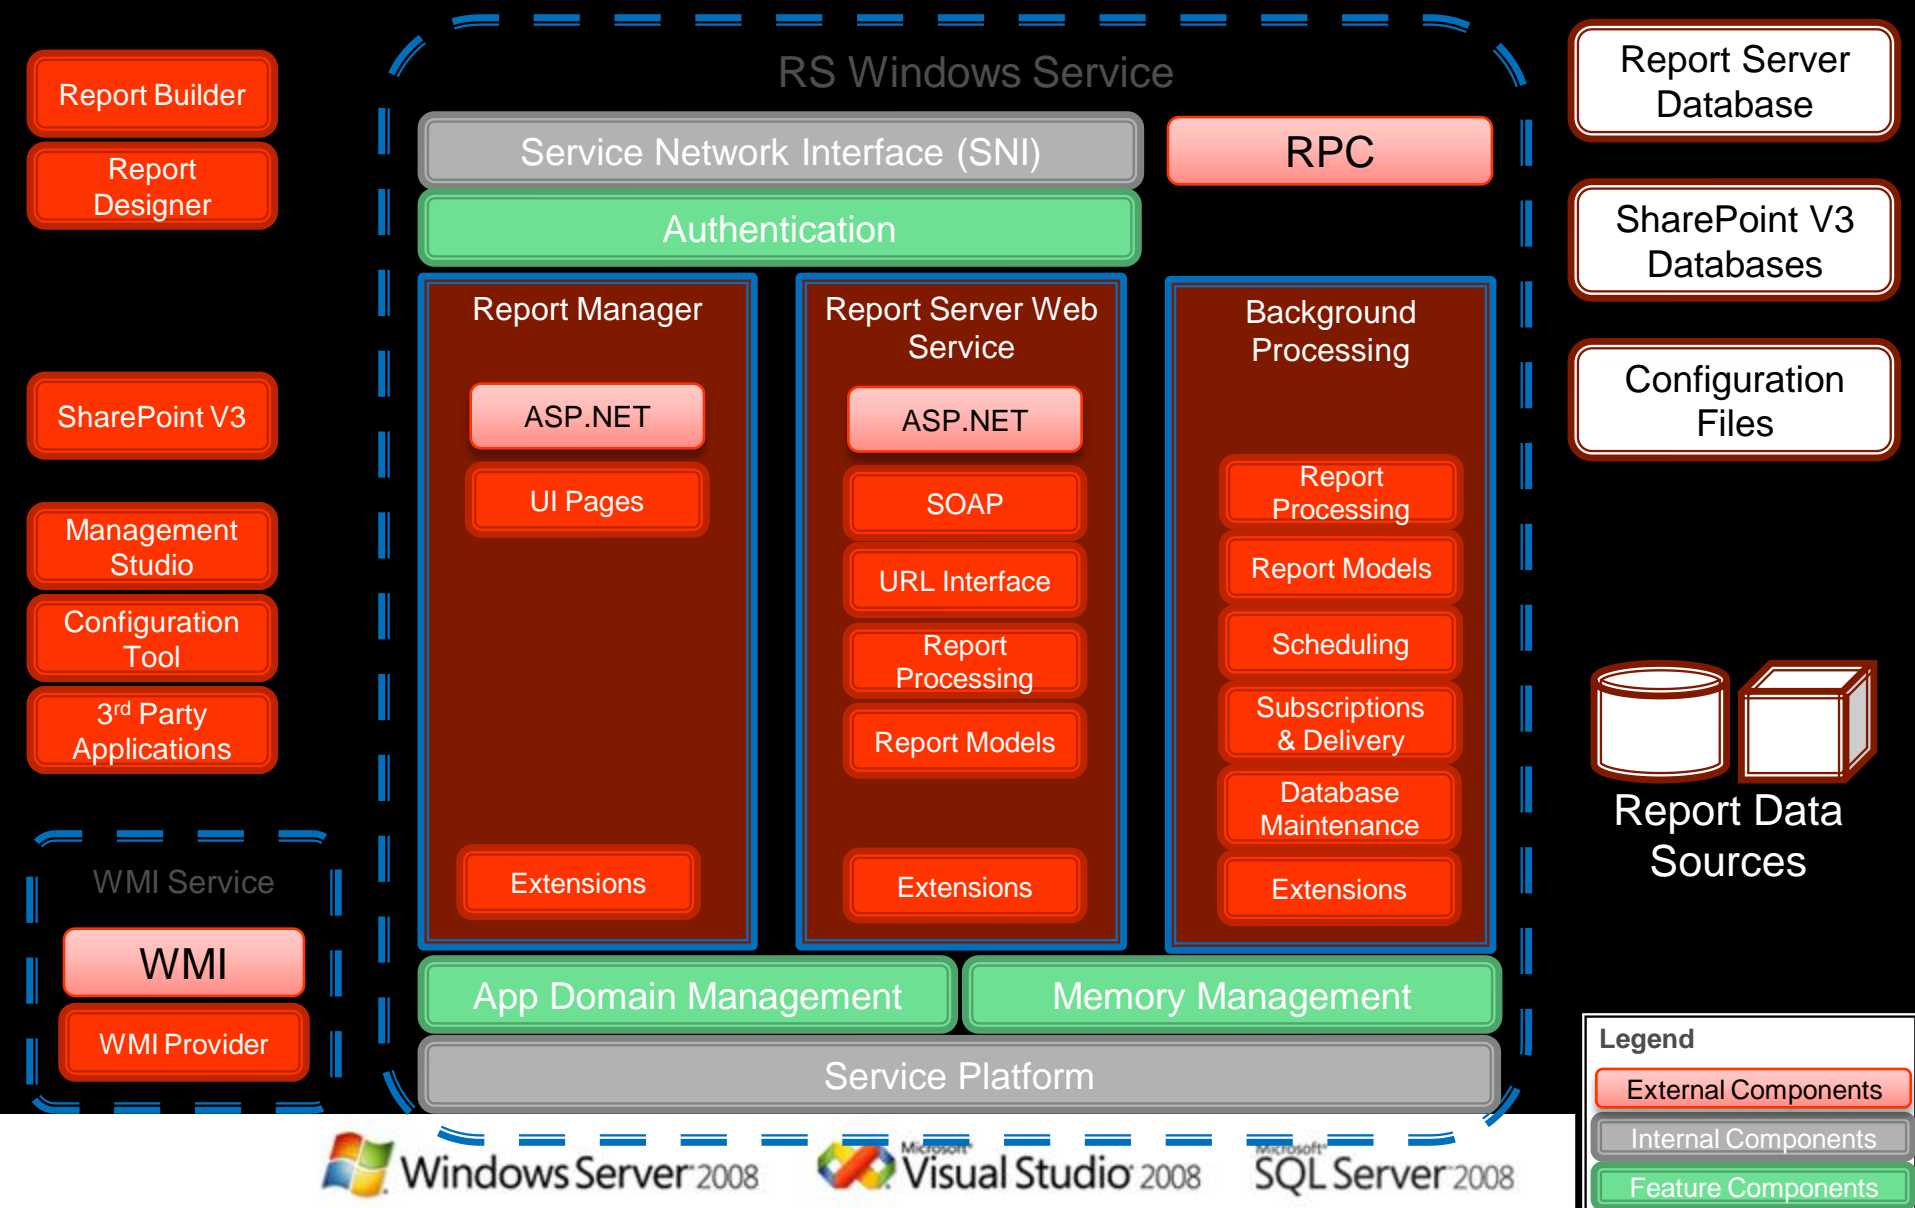

SSRS 2008 Architecture

- Report Server is not hosted in IIS
 - RS 2008 uses HTTP.SYS directly
 - Uses SQL Server's networking stack
- IIS is replaced by SQL Server internal components
 - SQL OS
 - SQL CLR
 - SQL Network Interface
- Design Goal: Don't break "anything"!

Why Remove IIS ?

- IIS complexity increases support costs
 - Many IIS settings can impact RS
 - Other applications hosted in IIS impact RS
 - Requires a two service model
 - Hard to deliver features like resource governing
 - Communication between services causes problems
- Reusing SQL Server components has great future benefits
 - Can reuse SQL Server's enterprise features
 - Can focus on additional value in RS
- Sometimes blocks deploying RS in the enterprise

SSRS 2008 Architecture

IIS & SSRS Co-existence

- RS & IIS 6+ use the same network stack
 - RS & IIS do not conflict in most Operating Systems
 - Can share a single port
 - Windows XP 32bit (IIS 5.1) is the only exception
 - Must have different ports
- URL Reservations
 - RS & IIS create URL reservations in HTTP.SYS
 - IIS makes weak wildcard reservations
 - RS makes strong wildcard reservations by default
 - Report Server URL supersedes IIS Virtual Directory with same name, port

Memory Management

- Server infrastructure for process memory monitoring
 - Dynamic, self-managing with memory pressure
 - Reduces throughput in memory pressure situations
- Report Processing uses a file system cache to adapt to memory pressure
 - Receives memory events from server
- Administrator is able to set targets (Min, Max)
 - Minimum threshold defines the amount of memory the server thinks 'belongs' to it

Memory Management

- The memory is only used if a request needs it
- Maximum threshold defines the not to exceed value
- Adapts to other processes consuming memory

RS 2008 Report Engine Changes

- Report Processing
 - On-demand processing
 - Hierarchical cursor-based object model
- Rendering
 - New rendering architecture
 - Renderer rewrites

Why rewrite Report Engine

- Scalability

- Reports in SQL 2005 are memory bound
 - Memory usage is proportional to data size
 - Large datasets can cause out of memory exceptions
 - Memory usage in problem renderers (PDF, Excel, CSV)
- Very large reports can starve or fail many smaller reports

demo

Reporting Services 2008

SSRS Data Visualization

Windows Server 2008

Microsoft
Visual Studio 2008

Microsoft
SQL Server 2008

Dundas Acquisition

- The SQL Server Reporting Services team has acquired Dundas Software's Data Visualization products
 - Chart, Gauge, Map, Barcode, and Calendar for Reporting Services
 - Chart, Gauge for SharePoint
 - Chart Pro / Enterprise, Gauge, Map, OLAP Chart and Table Controls for Visual Studio (Windows and Web)

A Few Examples

Dundas Chart for Reporting Services

Dundas
Data Visualization

Dundas Chart for Reporting Services

Tablix - New Data Region

- Tablix provides a combination of the best features of table and matrix data regions
- Build Versatile Reports
- Allows a flexible layout with multiple row and column groups

demo

Report Designer, Visualization & Tablix

Summary

- SSIS 2008 Improvements
 - Improved Scripting
 - Cache Lookup
 - Data Profiling
- SSRS 2008 Improvements
 - Report Rendering Architecture
 - Data Visualizations (Dundas & Tablix)
 - Rich Memory Management
