# Module Overview

**Developer responsibilities**

**Why we need to understand  
query execution**

**Course objectives**

**Course structure**

# Primary Tasks of a Developer

**Write code**

**Fix code**  
(write more code)

A developer's work doesn't end  
when the code is checked in!

**T-SQL is declarative**

**We need to understand what decisions were made by SQL Server**

- Every query has a query plan generated
- Every query has execution metrics

## COURSE OBJECTIVE

Explain what information can be captured about a query and its execution from SQL Server.

Query execution metrics

Using performance metrics

Query text and plan

## **COURSE OBJECTIVE**

Provide an understanding of where to find information about query execution and what it means

**Methods to capture information about query execution and performance**

**Interpreting query metrics**

## COURSE OBJECTIVE

Step through an execution plan and the information it provides

How to read a query plan

How to find information in a plan

Discuss what's not important in a plan

## **COURSE OBJECTIVE**

Understand the information included in a query plan

**Examine the most frequently-seen operators in a query plan**

**Examine how changes to a plan can affect query performance**

**Demonstrate additional, valuable information found within query plans**

# Course Focus and Structure

**Finding Information About Queries**

**Understanding Query Metrics**

**Reading Query Plans**

**Operators in a Query Plan**

**Important Information in a Plan**

# What We Covered

**Developer responsibilities**

**Why we need to understand query execution**

**Course objectives**
